

# The LPE 300 Workstation

WiLiX, the parking station management system

#### **BENEFITS**

- Supervision of multiple car parks
- Flexibility
- Easy to use
- Availability
- Reliability

## A 3-dimensional parking station management system

Building on its high-level expertise in advanced technologies and its experience in car park payment collection, Thales has developed **WiLiX** - a high-tech solution combining exceptional stability, flexibility and ease of use.

WiLiX's 3-tier architecture gives operators real-time access to information, powerful deferred-time functions and total interactivity. All the equipment in the system is networked using Ethernet and can interface with other systems (e.g. video, identification and licence plate recognition) as well as access online services through the internet.

## **Operation**

The LPE 300 workstation allows operators to supervise the overall car park operation. It works in conjunction with the car park server to analyse, manage and record each device in the WiLiX system. The LPE 300 can serve as a "compact" station incorporating all the functions of the LCM 300 cashier terminal or as a stand-alone unit.

Any number of LPE 300 systems can be linked to one or more remote car parks.

Supervisory screen

## > The LPE 300 Workstation

## A multi-application workstation

## **Advantages**

Linked to a car park server, the workstation can incorporate a wealth of applications on a single machine or access applications across several machines. The LPE 300 uses the data stored on the car park server. It can accommodate additional functionalities such as a credit/debit card server and licence plate recognition.

Supervision remains the primary application for any car park operator.

The LPE 300 can be used as a terminal to access the maintenance management software, NOVA.

## Standard features

- · Supervision of one or more car parks
- Summaries of equipment condition and operation (entry/exit terminals, automatic pay stations, private access readers, etc.) in one or more car parks
- Reporting function (report, statistics, hourly user/incident lists, etc.)
- Pass card holder management
- System and equipment configuration
- Management of user profiles and rights, specific lists, rates, debit/credit cards, etc.
- Export data to Excel
- Remote management/assistance on equipment

## **Options**

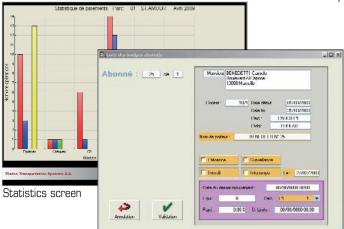

- Centralised Pass Card Management Application ECSTRA
- Statistics application
- Billing N2 link application
- Remote controlled exception functions for LCA 340-360 automatic pay stations
- Interface with bank server and synchronisation of remote data and reports

### Technical characteristics

- Standard office Windows computer or rack-mount PC (RAID 1 or 2)
- TFT colour monitor
- · Keyboard, mouse
- A4 printer
